

Capabilities Statement

Overview

Site Ready Systems is a regional consultancy specialising in **practical safety and operational systems** for trades, contractors, agricultural operations, councils, and field-based organisations.

We support businesses operating in **high-risk, remote, and contractor-heavy environments** by providing clear, fit-for-purpose systems that stand up to regulator, insurer, and principal-contractor scrutiny — without unnecessary complexity.

Our work is grounded in real operational experience and focuses on **clarity, defensibility, and usability**.

Core Capabilities

Safety & Operational Systems

- Safety Management System (SMS) design, review, and implementation
- Integration of WHS requirements into day-to-day operations
- Development of practical policies, procedures, and registers
- Contractor and onboarding systems
- Training matrices and competency tracking
- System simplification and consolidation for growing businesses

ISO 45001 Gap Analysis & Certification Preparation

- ISO 45001 readiness assessments and structured gap analysis
- Alignment of existing systems with ISO 45001 requirements
- Practical guidance on embedding ISO principles into operations
- Development and refinement of required documentation and records
- Support through certification preparation and audit readiness
- Translation of ISO requirements into practical, site-level processes

Focus is on readiness and sustainability — not template-driven systems.

Inspections, Audits & Reviews

- Workplace and site safety inspections
- Operational and compliance audits
- System and document reviews
- Identification of critical gaps and improvement priorities
- Practical action plans tailored to operational realities

Incident & Risk Management

- Incident and near-miss investigations
- Root cause analysis and corrective action planning
- Regulator and authority liaison support
- Risk assessments and hazard identification
- Support following notifiable incidents

Digital Systems & Workflow Design

- Conversion of paper-based systems into structured digital platforms
- Microsoft 365-based safety and operational systems
- Digital registers, forms, and access controls
- Workflow mapping and documentation usability design
- Integration with existing job management or business software

Training & Advisory Support

- Targeted WHS training and toolbox sessions
- Supervisor and leadership safety support
- Advisory support for contractors and principal engagement
- Executive and board-level briefings
- On-demand support for emerging operational or compliance issues

Industries & Environments

Experience across:

- Agriculture and ag-business operations
- Trades and contracting businesses
- Local government and utilities
- Aviation and transport-related operations
- Remote, regional, and high-risk work environments

Approach

- Consultant-led and experience-driven
- Practical, plain-language solutions
- Focused on systems that get used
- Scalable support aligned to business maturity
- Designed to reduce risk **and** operational friction

If it doesn't make sense on site, in the paddock, or in the workshop, it doesn't go in the system.

Availability

Services are delivered on a **project, on-demand, or staged basis**, depending on client needs and operational context.

Regional Queensland focus.
